

Goal: *To create a restaurant management project.*

Part 3 – Implement logic to dispatch order and manage item list.

Programs : driver.py, user.py, items.py, owner.py, orders.py

Files : customer.txt, items.txt, orderlist.txt

- **Driver.py:** Update Restaurant(owner) logic as necessary
- **Owner.py :** Update owner.py to implement update items list and dispatch order.
- **Items.py** → Add modules to add a new item, delete an item and update the price of an item.

```
-----What do you want to do?-----
                                1. Update items list
                                2. Dispatch order
                                3. View the Item list
                                4. Close
1
-----Choose 1/2-----
    1. add a new item
    2. delete an item
    3. update the price
```

- **Orders.py :** Add method to dispatch the order
